

Remappable pins: IR_PIN (PC4), LED_PIN (PC5)

Pins marked "remappable" in the above list may be remapped to unused pins, or swapped with other remappable pins in the Makefile configuration.

Makefile configuration:

IR_PIN = PC4

LED_PIN = PC5

R1 is optional, but protects against accidental resets due to noise.

D1 is optional, but provides ESD protection for the RESET pin.

C2 is optional, but provides additional noise protection for the RESET pin. (If debugWire or PDI is being used, C2 cannot be present.)

R3 and C7 are optional, but recommended for protection against EOS.
